Greatest use of religious imagery/settings in games?

#1

I'm not religious, but I absolutely love religious art and architecture as a backdrop for horror (see: The Exorcist).

Thief Gold is one of the most disturbing games I've ever played precisely due to its amazing level design layered with some chilling and powerful religious imagery. There's something unnerving about sneaking around dimly-lit hallways littered with portraits of beheadings and The Devil and creepy statues just sitting there.

Check out some of the screens on this page to get an idea of what I mean, though none of them are that great, unfortunately.

Scratches is another game that heavily relies on religion to tell its story and set its atmosphere, and it works so well because you just happen to be trapped by your lonesome in an old, Victorian mansion.

Back on topic, the only thing that pops into my head when someone mentions religion and video games is Xenogears/saga.

I don't want to say that it has the best use of religious themes or imagery though because I never bothered trying to understand it.

Bayonetta. I've mentioned it in other threads, but I adored the artistic interpretation of the armies of heaven. The strike a nice balance between terror, majesty and otherworldliness that avoid the conventions of heaven being full of fabric draped, harp playing pussies. Especially the higher ranking creatures, which in design capture the fearful "wrath of god", while still maintaining a dignity and holiness, if intimidating.

#13

I also liked that the artists drew upon Roman Catholic iconography of porcelain whites and extravagant, borderline sinful wealth, to keep the creatures still looking 'pure' and 'heavenly' even within their otherwise obscure designs.

Fortitudo is a good example of what I mean.

I loved El-Shaddai. Everyone calls Journey a spiritual game, but I was a bit let down to finally reach my destination and have it all just fade to white light. It takes more creativity to really pin down what a heavenly realm would look like, and actually hammer out the design of it. #26

Certainly better gameplay than Journey though, which is basically just walking forward. I agree, the gameplay isn't up to DMC or Bayonetta standards. But, the combat system has more depth than it seems at first glance. They don't tell you all the moves so you have to play around with the timing to get all the different commands. When I added up all the different attacks and weapons, it was over 20 different types of attacks, if I remember correctly.

The primary draw is the art though. The soundtrack also has a few gems.

[Silver Haze](#)
[Hellfire Scream](#)

I definitely still recommend the game, especially for the cheap price it must be now.

I must confess I only played the demo, so I never deeply explored the combat system, so maybe it is better in the full game.

The combat was really simple, but pretty fun in the long run; it could've easily gone stale, but thankfully, it didn't. Art is, of course, fucking gorgeous, and the story was interesting. Just such a solid package. One of my favorite games ever, and definitely my best purchase this gen.

And yeah, Journey just didn't do enough for me, but damn it looked good

Dark Souls is another contender. Spirituality and darkness lingers everywhere. You have the opposite of a blessed world. And that is very hard to pull off without going into the usual cliché territory. Dark Souls pulls it off, and what a swag it has, thanks to that.

I would also give honorable mention to **Shenmue**, because it might not have too many churches, but it has spirit, and it has "beliefs" in it. And it portrays them perfectly.

(...and we could go on and on. Grandia II. FFX. Nier. Hm....)

There's a small side-scrolling section where you're in a cathedral of sorts, and the background consists of a huge stained-glass window. It's just a platforming segment, there's no combat, and a serene choral track can be heard while playing through it. The whole spiritual vibe of this level in particular I found incredibly enveloping.

I always liked the Church of Unitology which you visit in Dead Space 2. I think the concept generators and modellers did a great job making a building that was dedicated to a truly alien way of thinking, but still incorporated gothic church styling to give it a human edge. An odd building that I found chilling and beautiful in equal amounts.

Kefka, from FF6, where the entire battle parallels the Divine Comedy, the cast working their way up from Inferno through Purgatory, meeting the Christ and the Madonna, culminating in their encounter with God.

Also, one of my favorites is the final battle of MMZ. A horned red guy versus a giant white angel? Yeah, no symbolism there.

Realms Of The Haunting, old MS-DOS game. Towards the end it does this sort of thing brilliantly.

Still well worth playing, BTW.

Pleasantly surprised by the Thief mention in the op, although *the* game about religious fanaticism going to extremes has to be Thief 2. I still get shills about the whole thing, but I'll rather not spoil it for the people who haven't play it.

Final Fantasy Tactics has a great storyline.
"Don't blame us, blame yourself. Or God."

Shin Megami Tensei series (let's see if this works):

Lots of great imagery from various religions and sects. (Hinduism, Buddhism, Christianity, etc)

Not just the obvious chu-chu on a cross stuff with Xenogears, that game is chocked full of it. "Slayer of God" etc.

I always really liked the church area in Castlevania SotN. The beautiful backgrounds plus the music made it my favorite area in the game. #89

Also this pic might end up being the heaven from the game:

I thought that Final Fantasy Tactics had a good representation of a religious society in a game. #91

Well, ignoring the part where you go and fight god, but come on. It's a JRPG they cannot avoid fighting god.

Dante 's Inferno, I really liked the representation of the different circles of Hell. #92

I loved the design in most of the levels but I thought heresy, fraud and treachery were pretty lazy. #93

Thinking about Dantes Inferno makes me want a Dark/Demon's Souls game set in the nine circles of hell. It would suit it perfectly.

Really? When I heard about a giant female demon throwing winged babies out of her nipples I thought it was cheap and crappy, specially because the actual Dante's inferno in the divine comedy didn't create its structure and punishments out of nothing, Dante thought about them very well and there is a reason things were the way they were. However I never touched the game so maybe I'm judging it wrongly, although I highly doubt it.

I loved Dante Inferno style. Really Gothic and this is somewhat what I would think Hell look like. Giant shooting babies from boobs is always a selling point.

Its pretty serious about his theme. Like Greed monsters are blobs of fat who vomit and shit on you. Lust have succubus who have spike coming from the vagina. Greed is full of gold lava and Limbo is full of babies who didnt have the chance to get a Batism.

Its really good imagery for a God of War clone.

I tried to find a good picture but I had no luck.

The **St. Christopher's Church on Dead Island** was nice, every time I went there, music started to play. I felt safe. It also gave that setting that since "the dead are walking" people tried to find salvation in there.

Best I could find on quick search:

Its really good imagery for a God of War clone.

As I suspected it does with the divine comedy what god of war did to Greek mythology.
